

Sign up

I don't want to get like this missed information for my new users.

And to solve this issue i already told you before about my suggestion (app should not create a new user in the dashboard until he completes his full information and submit it).

So when user start signing up with Facebook or Google, the app will create new fake user profile it will have 2 options:

1- When user finish and submit all the info, then the app will gonna make it real user profile and it will be submitted in the dashboard.

2- When he couldn't complete the info or he exit, then the app will delete and clear his info that was created in the fake user profile.

Company's Reply -: Once the user will create account from facebook & google the entry will be stored in the database & it cannot be deleted automatically.

But these entries will never display in the dashboard & once the user will come back he will be sent to the same page where he left the application.

Wallet

Wallet feature will be deleted.

So all the incomes for me will be based on adding gear plans only.

Subscription Plan

So there will be 4 plans

1. One month - free trial
2. Three month - 4\$
3. 6 months- 6\$
4. 12 months - 10\$

OTP

Show only the 4 digit OTP in the sms received.

Favorite

This will be by the gears not by the providers

<https://prnt.sc/oxoag2> -- Screen will be like this.

Types & size

Admin can add one of these options not both,either he can add types or sizes.

Blank screen UI

<https://prnt.sc/oxoaxz>

All the blank screens UI will be like this.

New Order design

<https://prnt.sc/oxocyl> --

New job request screen

<https://prnt.sc/oxoppr>

Place offer for new request

<https://prnt.sc/oxoqas>

1- adding gear in the admin panel:

When I create a new gear in the admin panel i should complete all this points which is :

- *gear name
- *gear image
- *gear icon
- *type & size
- *gear details
- *subscription plans
- *duration of work
- *pricing

Every gear created will have the same points but the details will be different

2- sliding feature will be available when:

- *I want to see the next provider (provider list screen)
- *I want to see next offer (offers screen)
- *I want to go to next job request (job request screen)
- *I want to see next image (order details screen)
- *I want to see next gear (favorite screen)
- *I want to see my next order (my orders screen)

3- Notifications:

- *when admin approve user to become a provider.
- *when offer placed to my order.

* when I receive a new job request (you will receive notification if costumer place new order for your gear type and the work site is matched with your city in your profile only,no notification for other job requests not match with your gear type and city)

*when your order is about to be deleted (orders will stay for one month, if orders remain time one week then you will be notified).

*when you get new advertisement or message from admin

4- subscription button will be instead of wallet button on the slide menu.

I don't know how is this screen going to look like because it's not my suggestion to add this screen, it's

5-truck number:

Every user, order, subscription, request, when created it should have 10 random number so that we can categorized and truck later, so ;

*User ID will start with U letter and next 9 random numbers like (U736517090)

*Order will start with J letter then 9 numbers like (J3762972029)

*subscription will start with S letter then 9 numbers (S8368255510)

*request for contact us screen will start with R then 9 numbers

#Stationing button will be deleted

#icons and text will be increased bigger

#icons and text will be increased bigger

#I told you before, gear should have types or sizes, ok lets merge it and make it one option and call it (type & size)

Example:

Gear = flatbed tow truck

Type & size = single car

Type & size is going to be among gear details, example:

Gear = flatbed tow truck

Details:

Type & size = double car

Model = 2019

Brand = Isuzu

#icons background will be transparent

*you will get notified when your subscription is about to be deleted (when subscription expired your gear will be deleted from your list, one month you got to renew, and when subscription expired new job requests and offer for sale toggle buttons will be off, so you will not going to get new job requests, and for your job requests that already there you can see it but you can't place offer)
